

Online courses from Bodenseo

All you need to take part in our online courses is a PC or laptop connected to the Internet. All applications used during the training run on all browsers and under all operating systems. No special software needs to be installed.

Communication Platform

We use Microsoft Teams as the platform for communication during our course. You may or may not install a desktop application. You can use a browser like Chrome for example.

Your required infrastructure

- 1. A PC or Laptop
 It doesn't matter which operating system your computer is running on, e.g. Microsoft
 Windows 10, Linux (Ubuntu, Fedora, Mint, SuSE and so on) or MacOS.
- 2. Internet connection
- 3. In order for you to be able to take part in the communication orally, your PC or laptop must have a built-in microphone, or you can use an external microphone, which can be connected via USB, for example.
- 4. A video camera would be desirable, but is not a "must".
- 5. You do not have to install any software on your computer.

Working Environment by Bodenseo

- 1. You can do the exercises and examples on a server provided by us specifically for the training. This ensures that there are no installation problems during the training. We use Jupyter Hub on this server. However, there is also the option of working with vi or emacs on these servers, if someone specifically requests this.
- 2. All the necessary documentation material will be provided online as well!
